

Poor CH farmer. He even has to work at lunchtime and holidays so he can disturb the populace's peace by showing the paupers HOW MUCH work he has. He is soooo poor, that he has to sell his agricultural land (worth 3.50 m2) as building land. (worth +100X?) Sigh. 😞 But wait, he has too many cows per m2 so he needs to rent more land.

SOME WANT IT ALL AND THEN A BIT MORE, all's possible if you are part of THE CLUB.

En Gruyère, une nouvelle exploitation laitière XXL fait le pari de l'automatisation

Le domaine de la Lorraine, en Gruyère, a ouvert ses portes vendredi et samedi au public. Le site, qui constitue la plus grande exploitation laitière fribourgeoise, a nécessité deux ans de travaux et 10 millions de francs d'investissements. Ce nouveau modèle d'exploitation questionne notre...

Switzerland's Dairy Industry

Switzerland stands out in the global dairy market for its high-quality products, combining rich traditions with modern innovation. The country's dairy industry is well-regulated and contributes significantly to both local and international markets.

Dairy Cattle and Milk Production

Switzerland has approximately 550,000 dairy cattle. These cattle support the production of around 3.6 million tonnes of milk annually, reflecting the strength and sustainability of the Swiss dairy industry.

Milk Processing and Cheese Production

The milk processing industry in Switzerland handles about 3.4 million tonnes of milk each year. Cheese production is a major feature, with Swiss cheese varieties like Gruyère and Emmentaler gaining global acclaim. The country produces approximately 190,000 tonnes of cheese annually.

Milk Powder and Whey Production

Switzerland produces an estimated 60,000 tonnes of milk powder and 45,000 tonnes of whey each year. These products play an important role in its export market.

Switzerland exports around 120,000 tonnes of dairy products annually and imports about 150,000 tonnes to meet domestic needs.

Significant Events in the Dairy Industry

- 2023: New regulations were introduced to enhance sustainability and reduce carbon emissions in dairy farming.
- 2022: Emmi AG expanded its export operations to Asia and North America.
- 2021: The government initiated subsidies to boost organic dairy farming.
- Switzerland has become a key source for dairy imports, including exports to Ukraine.
- DSM introduced Bovaer to enhance dairy production sustainability.
- Graduates received international exposure through Nestlé apprenticeships.
- The Swiss Food & Nutrition Valley event in Bern gathered over 60 stakeholders.
- In 2014, Hochdorf acquired a 60% stake in the dairy sector.

A l'approche de la période de fauche, **Prométerre rappelle que chaque printemps des faons sont blessés, mutilés ou tués par les machines.** L'association vaudoise encourage les agriculteurs à utiliser la technique des drones munis d'une caméra thermique pour les repérer.

Ce printemps, 552 faons ont pu être sauvés d'une éventuelle mort par fauchage dans le canton des Grisons grâce à des drones équipés de caméras thermiques, annonce ce mardi l'Office grison de la chasse et de la pêche dans [un communiqué de presse](#). Ce chiffre établit un nouveau record et fait du printemps 2022 «la saison de sauvetage de faons la plus réussie à ce jour» car ce sont près de 85 animaux en plus que l'année précédente qui ont ainsi été protégés.

OXYMORE
Diana sauve les faons

La faucheuse affûtée déchiquette les faons et les jeunes lièvres, qui plongent devant le danger qui s'approche. Elle hâche aussi les nids des espèces d'oiseaux nichant au sol comme le faisan ou la perdrix. L'utilisation accrue de faucheuses plus grandes et plus rapides augmente le danger pour le jeune gibier.

Faucher en épargnant les abeilles

L'utilisation de faucheuses mécaniques modernes dotées d'un conditionneur implique que l'herbe coupée est pliée et écrasée pour en accélérer le séchage. Ce procédé fait que de très nombreuses abeilles mortes, blessées et incapables de voler se retrouvent dans l'herbe coupée. Jusqu'à 24'000 abeilles par hectare sont ainsi tuées.

T'as vu ma toute nouvelle hyper rapide super FAUCHEUSE ??

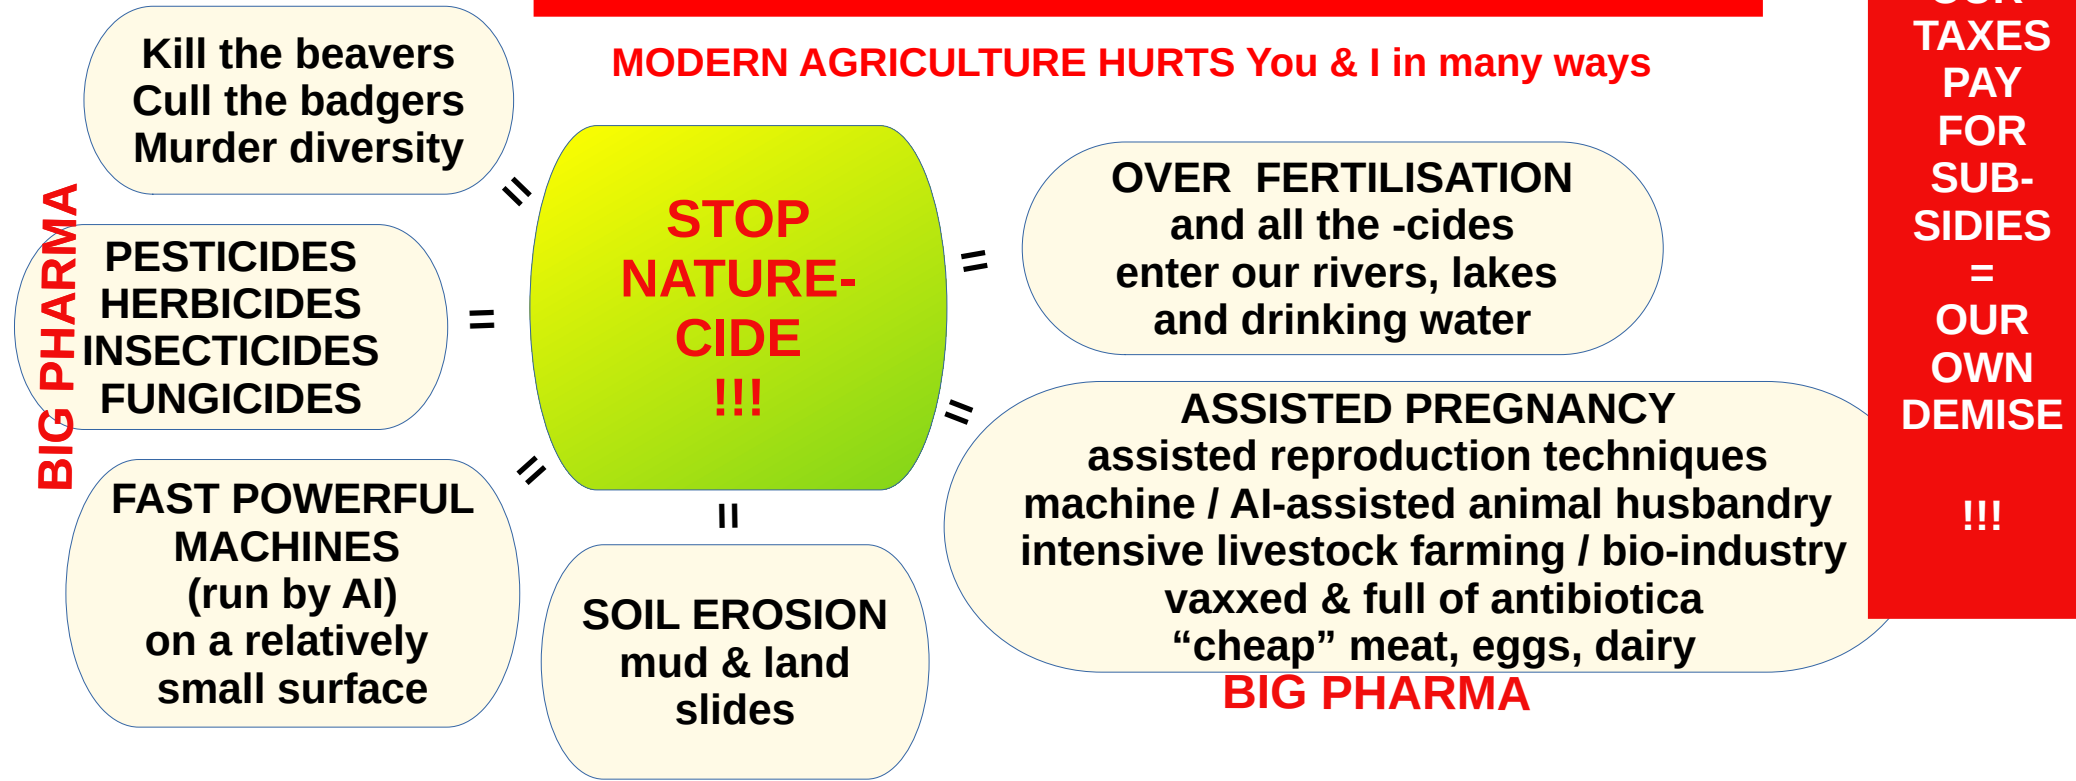

**R.I.P.
faons
oiseaux
lièvres
petits mammifères
abeilles...ETC.....**

Le sauvetage aérien des faons à l'aide d'une caméra thermique et d'un multicoptère est la méthode la plus sûre pour sauver les faons des faucheuses. Cette année encore, la Protection Suisse des Animaux PSA soutient le sauvetage des faons lors de la fenaison avec sa propre flotte de drones

Chaque année, de la mi-mai à la fin juin, les équipes bénévoles de la Fondation sauvetage faons Vaud, fondée en 2019 sous l'impulsion de la Fédération des sections vaudoises de la **Diana (FSVD)**, se mobilisent, y compris dans notre région, pour protéger les faons mis en danger par les machines agricoles, au moment de la fauche des prairies. Lors de ces campagnes de sauvetage, entre 20 et 30 drones sont déployés pour repérer ces nouveau-nés, afin de signaler leur présence aux agriculteurs qui peuvent ainsi les épargner.

Les chevrettes mettent bas pendant les mois de mai et de juin. Les faons restent tapis dans les hautes herbes où ils se protègent des prédateurs en restant immobiles. Ils sont presque introuvables du fait qu'ils sont inodores. Cependant, cette stratégie leur est fatale lorsque les paysans fauchent leurs prés. Au lieu de s'enfuir, les faons se figent et n'ont aucune chance d'échapper aux machines qui progressent très vite, en fauchant des espaces très larges. Chaque année en Suisse, ce sont des centaines, voire des milliers de faons qui sont atrocement mutilés ou tués par les machines agricoles. **C'est quand la dernière fois, que vous avez vu un lièvre ? Chaque Canton à ses règles.....**

Back to basics. Health and Wellbeing of all creatures first. NO MORE LUKEWARM.**

Chez les chasseurs, on trouve THE GOOD, THE BAD & THE UGLY...
Au lieu d’interdire enfin la chasse d’espèces menacées – telles que le lièvre brun – la proposition de révision de la Loi fédérale sur la chasse et la protection des mammifères et oiseaux sauvages (LChP) met ces animaux directement dans le viseur des chasseurs.

NO WORRIES ; IMPORT ONLY

Battery cage

Battery cages are a housing system used by factory farms for various animal production methods, but primarily for egg-laying hens. The name arises from the arrangement of rows and columns of identical cages connected, in a unit, as in an artillery battery. Although the term is usually applied to poultry farming, similar cage systems are used for other animals. [Wikipedia](#)

HOW COWS CONTRIBUTE TO GLOBAL WARMING

Ruminants are herbivores that regurgitate their food to re-chew it. Microorganisms in the animal's gut break down carbohydrates into simpler molecules.

Ruminants including cattle and deer produce large amounts of methane, a greenhouse gas with an impact on the atmosphere 23 times greater than that of carbon dioxide. The production of methane by this process is called enteric fermentation, and it accounts for more than a quarter of methane emissions in the United States (chart, above).

RIGHT: Naturally occurring and human-caused (anthropogenic) sources of methane.

Study Finds Human DNA in Hot Dogs

Clear Food, part of Clear Labs, analysed 345 individual hot dogs and sausages from seventy-five different brands sold at ten food retailers. The findings showed that 14.4 per cent of hot dogs were problematic in some way. (Made-up numbers , MADE UP STUDY TO MAKE US AWARE?)

Problems included the presence of ingredients not on the label and hygienic issues, such as the presence of human DNA.

Those studies keep Popping up...

Clear Food used next-generation genomic technology to analyze the samples at a molecular level, ingredient by ingredient.

In terms of substitutions, the study found evidence of meats not found on labels, an absence of ingredients advertised on labels, and meat in some vegetarian products....maybe just a finger nail...

Kuru, a transmissible spongiform encephalopathy, is a disease of the nervous system that causes physiological and neurological effects which ultimately lead to death. It was spread among the Fore people via funerary cannibalism. Deceased family members were traditionally cooked and eaten. It is characterized by progressive cerebellar ataxia, or loss of coordination and control over muscle movements

WHAT IF...

LET'S JUST CALL IT DEMENTIA

Variant Creutzfeldt–Jakob disease (vCJD), formerly known as new variant Creutzfeldt–Jakob disease (nvCJD) and referred to colloquially as "mad cow disease" or "human mad cow disease" to distinguish it from its BSE counterpart, is a fatal type of brain disease within the transmissible spongiform encephalopathy family. Initial symptoms include psychiatric problems, behavioral changes, and painful sensations. In the later stages of the illness, patients may exhibit poor coordination, dementia and involuntary movements .
